

FIND MY BAG!

HASSLE FREE LUGGAGE

Live luggage tracking application  
with QR Codes and a progressive  
web application

# PROCESS FLOW

## Value propositions

- OPERATES GLOBALLY
- HIGHLY SCALABLE
- EARLY ISSUE IDENTIFICATION
- UBIQUITOUS PRESENCE
- MESSAGE BROKER SYSTEM

### Progressive Web App

Robust application with cross platform support. Work like native application on phones. Available and easily maintainable across multiple devices.

### Zero system integration

Implementing this solution requires no system integration. We store all relevant travel, flight and bag information in our platform using robust cloud based infrastructure.

### Always allowed on board

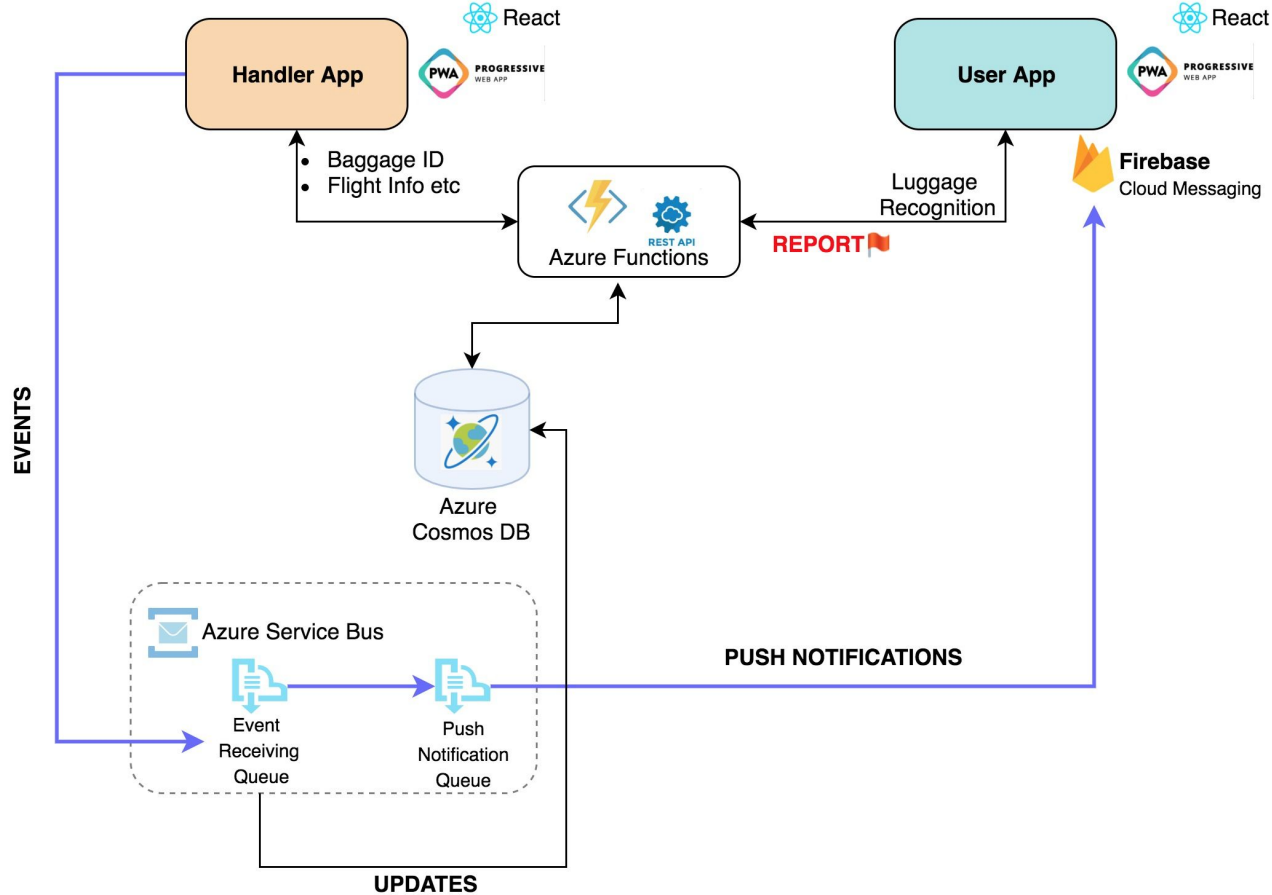

Instead of using bluetooth beacons or RFID, which will be difficult to produce on scale and run into compliance issues, our solution is just an addition of QR Code tag making it compliant with the most stringent Aviation regulations.

### LIVE! Realtime Push Notifications

With real time live updates and push notifications, you can locate the luggage always and everywhere, both outdoors and indoors.
